

# Accounting Master Stock Management

Shareholder-owned telecom companies have the stock management capabilities they need with MACC's Accounting Master. The program's stock functionality includes handling all of the crucial tax-related tasks required each year.

## Designed for telecom companies

Accounting Master's Stock Module was developed for the exclusive use and needs of telecom companies. The stock module is easy to use and is built directly into Accounting Master. It gives companies the ability to have an unlimited number of shareholders and to offer company specific classes of stock. The module also supports the ability to manage holding companies. Its major processes are divided into three main areas.

## Dividends

The Stock Module tracks dividends due to all of a company's stockholders. It can create dividend checks for printing or distribute payments electronically via ACH. It also processes and creates 1099-DIVs when needed for tax purposes. The module's functionality includes special processing for the handling of dividends owned by estates.

## Transfers

Transfers between stockholders are also managed by the Stock Module. This ability to manage transfers includes stock splits.

## Voting

The module has the ability to track and

## Key Benefits

- Empowers your company to easily manage all stockholder related tasks
- Dividend checks can be created for printing or paid electronically
- Creates all needed forms for tax season
- Simplifies processing of dividend transfers, splits and the handling of estates
- Makes it easy to hold and report on stockholder votes

report on the results of shareholder votes. The ability to manage votes greatly simplifies this important shareholder-related activity.
